Training Conducted By:
Anudip Foundation
Trainer: Mr. Mohd Nisar
(1 Week Training Session)

Date of Submission: August 2025 (or update accordingly)

Prompt for Futuristic 1-Minute Video:

"Imagine a world where technology has seamlessly integrated with everyday life. The year is 2050, and innovation has taken humanity to new heights. Begin by showcasing futuristic cities with towering skyscrapers, flying vehicles, and digital interfaces floating in the air. Transition to glimpses of advanced AI-powered robots helping in daily tasks, like cooking, cleaning, or even assisting with healthcare. Include scenes of people interacting with augmented reality glasses and smart devices. Show advancements in transportation with self-driving cars and high-speed trains, as well as new methods of communication—holograms, for example. End with a message: 'The future is now. Embrace innovation and shape tomorrow.'"

Generated from ideogram.io

"A futuristic cityscape in the year 2050, with towering skyscrapers made of glass and metallic surfaces, glowing neon lights, and flying cars zipping through the air. The sky is filled with holographic advertisements, and people are seen wearing sleek, high-tech clothing and augmented reality glasses. The scene should feel vibrant, dynamic, and utopian, with a mix of nature and technology, showcasing green rooftops, digital gardens, and eco-friendly transportation. The atmosphere should feel both advanced and harmonious, combining cutting-edge technology with environmental sustainability."

Summary

The video explores the relationships and distinctions between artificial intelligence (AI), machine learning (ML), deep learning (DL), and generative AI, clarifying common misconceptions and explaining their evolution and applications. Artificial intelligence broadly aims to simulate human intelligence, encompassing learning, reasoning, and inference. Machine learning, a subset of AI, focuses on enabling machines to learn patterns from data without explicit programming, excelling in tasks like prediction and anomaly detection. Deep learning, a specialized form of machine learning, employs multi-layered neural networks inspired by the human brain to handle complex data representations, although its decision

Grammarly Working Example

When we go to the library, there are many different kinds of books to choose from. Sometimes I like to read fiction, but other times I prefer non-fiction because it has real facts. My friend always says that the best book she read was about science and technology, but I think history is more interesting. It's important to read every day to improve you're knowledge and vocabulary.

That's all Thank you 🌸
